

EMBEDDED AGENT PILOT FOR DISTRIBUTION & TRANSPORTATION

60 days. One workflow. One operational KPI.

Built on Azure
Enterprise-grade security, scalability, and reliability.

Powered by AI Foundry
Build, evaluate, and operate agents with enterprise controls.

Enhanced with Microsoft Copilot
Extend productivity and insights across your organization.

Secure. Compliant. Connected.
Integrates with your systems, data, and operational stack.

Your KPI. Your target.
We hit it or you don't pay.

A low-risk, outcome-based pilot to deliver measurable results on a real distribution or transportation problem—fast.

HOW THE PILOT WORKS

Week 1: Map the workflow.
Baseline the KPI.

Define success criteria with operations and business leadership.

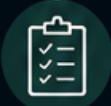

Weeks 2–5: Build the agent against your data.

Integrate with TMS, WMS, OMS, ERP, telematics, ELD, and other operational systems.

Weeks 6–7: Live in production.
Human-in-the-loop.

Deploy into real operations with oversight and measure impact in a controlled environment.

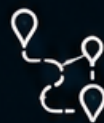

Week 8: Signed report.
KPI delta vs. baseline.

Deliver results report and clear recommendation for production rollout.

DISTRIBUTION & TRANSPORTATION USE CASES WE CAN PILOT

1

Delivery planning & route optimization

Optimize routes and stop sequences using real-time traffic, weather, capacity, and service constraints to reduce miles, cost, and on-time risk.

2

Real-time visibility & exception management

Detect delays, disruptions, and service failures early. Proactively notify, re-route, and take corrective action to keep shipments on track.

3

Warehouse & DC operations optimization

Improve labor productivity, dock utilization, slotting, pick/pack efficiency, and inventory accuracy to increase throughput and reduce operational cost.

4

Driver & field operations copilots

Give drivers and field teams instant access to load details, delivery instructions, policies, and issue resolution—right in their workflow.

5

Enterprise application extension for field operations

Transform complex TMS, WMS, OMS, and ERP processes into simple, mobile, voice-enabled experiences for safer, faster execution in the field.

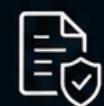

6

Demand forecasting & capacity planning

Forecast demand and capacity needs to balance service levels, asset utilization, and cost across the network.

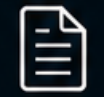

7

Claims, audit & compliance automation

Automate claims capture, proof of delivery, accessorials, and audit documentation while improving compliance and reducing cycle time.

8

Document & knowledge intelligence

Search and extract insights from BOLs, PODs, contracts, SOPs, policies, emails, and operational documents to accelerate decisions and reduce manual effort.

LOW-RISK ENGAGEMENT MODEL

- ✓ Focused on one operational KPI
- ✓ Fast time-to-value (60 days)
- ✓ Small footprint, big impact
- ✓ Built alongside your existing team
- ✓ Scale only after results are proven

\$75K–\$150K
FIXED-PRICE PILOT

Fixed fee. No time- and materials surprises.

No change-order chaos.

Built on Azure, AI Foundry, and Microsoft Copilot.

BOOK A TIME WITH OUR TEAM

Start with a 90-minute AI Innovation Workshop and we'll scope the pilot live.
